

RESEARCH INTEREST

A central theme of my research focuses on sliced Optimal Transport discrepancies and their applications in deep generative models, machine learning, and computer vision.

EDUCATION

Hanoi University of Science and Technology (HUST) Hanoi, Vietnam
Bachelor in Information System (another name of Computer Science) 2015–2020

- GPA: 3.61/4.00, Major GPA: 3.71/4.00, Top: 1%, graduated with Excellent Degree.
- Thesis: “Distributional Sliced-Wasserstein and Applications to Generative Modeling”

EXPERIENCE

VinAI Research, *website: www.vinai.io* Hanoi, Vietnam
AI Research Resident 2019 –present

- Research topics: Deep Generative Models, Optimal Transport
- Advisors: Dr. Hung Bui (Director of VinAI Research), Dr. Nhat Ho (Assistant Professor at UT, Austin)
- Skills gained: Deep Generative Models (VAEs, GANs, Flows, and Score matching models, etc), Optimal Transport (Sinkhorn algorithm, Slicing approaches, Barycenter, variants of Wasserstein distance, Gromov Wasserstein, etc, Applications of OT (Wasserstein Autoencoder, Wasserstein GAN, Color Transfer, etc)

Data Science Laboratory (HUST), *website: ds.soict.hust.edu.vn* Hanoi, Vietnam
Undergraduate Research Student 2018–2020

- Research topics: Probabilistic Graphical Model, Continual Learning.
- Skills gained: Fundamental Machine Learning and Deep Learning, Topic models, Bayesian inference, Variational techniques, etc

PUBLICATIONS

Distributional Sliced-Wasserstein and Applications to Generative Modeling

Khai Nguyen, Nhat Ho, Tung Pham, Hung Bui

- *International Conference on Learning Representations (ICLR) 2021 (Spotlight 3.8%)*

Improving relational regularized autoencoders with spherical sliced fused Gromov Wasserstein

Khai Nguyen, Son Nguyen, Nhat Ho, Tung Pham, Hung Bui

- *Arxiv*: <https://arxiv.org/abs/2010.01787>
- *International Conference on Learning Representations (ICLR) 2021*

BoMb-OT: On Batch of Mini-batches Optimal Transport

Khai Nguyen, Quoc Nguyen, Nhat Ho, Tung Pham, Hung Bui, Dinh Phung, Trung Le

- *Arxiv*: <https://arxiv.org/abs/2102.05912>
- *Under review at International Conference on Machine Learning (ICML) 2021*

Improving Bayesian inference in deep neural networks with Variational Structured Dropout

Son Nguyen, Duong Nguyen, **Khai Nguyen**, Nhat Ho, Khoat Than, Hung Bui

– Under review at International Conference on Machine Learning (ICML) 2021

PROFESSIONAL SERVICES

- Reviewer at International Conference on Machine Learning (ICML) 2021

AWARDS

- Third Prize of Scientific Research Student Award of Hanoi University of Science and Technology 2019

OTHER ACTIVITIES

Top 2% (19 over 1317) in Plant Pathology Challenge CVPR 2020
Fine-Grained Visual Categorization (FGVC) workshop May 2020

Southeast Asia Machine Learning School Greater Jakarta, Indonesia
Universitas Indonesia July 2019

Technical Talk Hanoi, Vietnam
Data Science Laboratory (HUST) June 2019

- Make an introduction to Optimal Transport and its applications in deep generative models.
- Slides: <http://bit.ly/3pDEp1f>

Teaching Assistant Hanoi, Vietnam
Data Science Laboratory (HUST) April - May, 2019

- Run a small course on fundamental machine learning models such as linear regressions, logistic regressions, k-nearest neighbors, support vector machines, and neural networks for new members.
- Make a tutorial about training deep neural networks with Tensorflow – a deep learning framework.

Top 12 in The 4th AutoML Challenge (AutoML3+) PAKDD 2019
Provided and Sponsored by 4Paradigm, ChaLearn, Microsoft and Amazon Jan 2019

LANGUAGES

- **Vietnamese:** Native
- **English:** IELTS - 7.5 Overall, 9.0 Reading, 8.0 Listening, 6.5 Writing, 6.5 Speaking.

PROGRAMMING LANGUAGES

- **Python:** Proficient
Libraries: Pytorch, Scikit-Learn, etc
- **Java:** Familiar
- **C/C++:** Familiar
